

Visual Standards Reference

Trane Technologies Product Management Training Program

Colors, typography, art direction, and document standards
derived from delivered course materials

Basis and status

This document reverse-engineers the visual system actually in use across the Trane Technologies Product Management curriculum. It exists so that new decks, workbooks, and run sheets built by Unmute Labs match what participants already see, without waiting on a formal brand kit.

WHAT THIS IS BUILT FROM

SOURCE	WHAT WAS EXTRACTED	METHOD
Introduction to Product Management deck (Rev Jan 2026)	Primary palette, title/section/content layouts, logo placement	Pixel sampling of rendered slides
PGT Experience Project Kickoff deck (Nov 2025)	Logo lockup, headline accent color, white-ground layout	Pixel sampling of rendered slides
Elevate Your Voice deck (Cultivate-sourced)	Photography direction, chevron overlay device, co-branding lockup	Visual inspection
Course decks: PGT Foundations, Product Business Strategy, VBP, GDLO, Product Lifecycle Planning	Structural conventions, heading patterns	Text extraction

CONFIDENCE TAGGING USED THROUGHOUT

TAG	MEANING
OBSERVED	Measured directly from delivered materials. Treat as fact, subject to the compression caveat below.
INFERRED	A pattern read across multiple slides. Reasonable, but not stated anywhere by Trane.
VERIFY	Unresolved. Needs confirmation from Aaron Olita or Trane brand before it is treated as a standard.

Compression caveat. Color values were sampled from JPEG-rendered slides, not from source theme files. Hex values are accurate to roughly plus or minus 2 per channel. Where a value sits close to a round number, the round number is given as the likely intent and the raw sample is shown alongside.

Standing recommendation. Request the official Trane Technologies brand guide and the source PowerPoint template through Aaron Olita. Until that arrives, this document is the working standard. When it arrives, this document should be reconciled against it and any conflict resolved in favor of the official guide.

Color

The system is monochromatic purple with a narrow set of functional accents. Purple carries brand identity; everything else carries meaning. **OBSERVED**

CORE

#6400FF
Trane Purple
rgb(100, 0, 255)
Primary brand field. Title slide grounds, key accent shapes, headline color on white.

#32007E
Deep Purple
rgb(50, 0, 126)
Section divider bands, framework blocks, table headers. The workhorse structural color.

FFFFFF
White
Default content ground. The deck is white-dominant; purple is used in bands, not as full-page fill except on covers.

FUNCTIONAL ACCENTS

#00007E
Navy
Third stage in sequenced diagrams. Reads as purple's cool sibling at slide distance.

#089C82
Teal
The single non-purple hue. Used to isolate one stage of a process as "you are here."

#A1A1A1
Neutral Gray
Completed, upstream, or de-emphasized stages. Also the ghosting layer on framework recaps.

#FE0000
Alert Red
Outline only, never fill. Circles the one element under discussion. Never decorative.

USAGE RULES

RULE	DETAIL	STATUS
Purple bands, white body	Section headers use a full-width #32007E band with white centered type. Body content sits on white below it.	OBSERVED
Headlines on white are purple	Content-slide titles run in #6400FF (sampled #7F32F2 after compression), left-aligned, sentence case.	OBSERVED
Gray equals inactive	In multi-stage frameworks, gray is not a brand color, it is a state. Do not use gray for live content.	INFERRED
One accent per slide	Teal or red highlights exactly one element. Two highlights on one slide destroys the signal.	INFERRED
No gradients, no shadows	Flat fills throughout. The only depth cue observed is the drop shadow on the Cultivate-sourced Elevate deck, which is a different house style.	OBSERVED
Secondary tints	No formal tint ladder exists in the observed material. If tints are needed, derive at 20/40/60/80 percent of #32007E rather than inventing new hues.	VERIFY

Typography

Every deck examined renders in a neutral grotesque, consistent with Arial or Helvetica. No display or serif face appears anywhere in the curriculum. **OBSERVED**

Open item. The corporate typeface Trane Technologies specifies in its official brand system is unconfirmed. Many industrial brands license a proprietary or foundry face and permit Arial as the system substitute for internally distributed files. Since all delivered course material renders in the substitute, Arial is the correct working choice for anything Unmute produces for this program. **VERIFY**

TYPE SCALE IN USE

ROLE	TREATMENT	CASE	NOTES
Cover title	Regular, large, white on purple	Sentence case	Two to three lines, ragged right, no centering.
Section divider	Regular, white on #32007E band	Sentence case	Centered. The only centered type in the system.
Content headline	Regular, #6400FF	Sentence case	Left-aligned to the content margin. Em dash used for subtitles, for example "Product Strategy Framework – Part 2".
Diagram labels	Bold, white on fill	Title Case	Short. Two to four words. "Where To Play", "Fact Base".
Body and lists	Regular, near-black	Sentence case	Numbered lists inside framework blocks; bullets on open content slides.
Callout labels	Bold, black, small	Quoted	Used with an arrow to point at the stage under discussion.

RULES

- Sentence case for headlines, Title Case for diagram labels. This split is consistent across all decks. **OBSERVED**
- No all-caps except within the logo lockup itself.
- Bold carries emphasis. Italic is reserved for facilitator-facing notes in speaker text, not for participant-facing slides.
- No emoji in any Trane-facing artifact, slide or document.
- Left alignment is the default. Center only for section divider bands and cover-style lockups.

Logo and co-branding

Primary lockup as it appears in delivered material. The apex of the "A" carries the brand purple; all other strokes are black on light grounds, white on dark grounds.

OBSERVED BEHAVIOR

ATTRIBUTE	OBSERVED
Construction	Wordmark "TRANE" in an open geometric treatment, with "TECHNOLOGIES" letterspaced beneath, plus trademark symbol. The two elements always travel together; no standalone wordmark was seen.
Color	Two versions in use: black with a purple apex on white grounds, and all-white on purple or photographic grounds.
Slide placement	Bottom right corner of the content frame, small, consistent position across every course deck.
Cover placement	Bottom right on purple covers; centered under the title on white covers.
Clear space	No published value. Observed clearance is roughly the height of the "TECHNOLOGIES" line on all sides. Use that as the working minimum.

INFERRED

CO-BRANDING WITH CULTIVATE

Materials sourced from Cultivate, such as the Elevate Your Voice deck, place the two marks side by side on a white bar beneath the content frame, Trane on the left and Cultivate on the right, separated by generous space and optically balanced rather than matched in width. Cultivate contributes its own chevron mark and a heavier, rounder type treatment.

Practical implication for Unmute-authored materials: the Trane system governs. Do not import the Cultivate drop shadows, angled banners, or 3D object photography into Trane-native course decks. Keep Cultivate styling contained to Cultivate-sourced modules.

INFERRED

Do not recreate the logo. Use the supplied asset only. The wordmark's open counters and letterspacing are not reproducible by setting type, and a rebuilt version will be visibly wrong at projection scale.

Slide architecture

Three layouts carry essentially the entire curriculum. Every course deck examined resolves to some combination of these.

A. Course cover. Full-bleed #6400FF. Outlined box top left for the delivery modality. Title lower left, sentence case, ragged. Revision date bottom left. Logo bottom right in white. Chevron line device sweeps the right third.

B. Section divider. Full-width #32007E band with centered white title, sitting below a narrow white strip. Content, usually a ghosted framework recap, sits on white beneath. Establishes where the learner is in the map.

C. Content slide. Purple headline top left. One dominant diagram, centered, occupying the middle band. Logo bottom right. Whitespace is generous and deliberate; slides are not filled to the edges.

STRUCTURAL CONVENTIONS

- One idea per slide. Diagrams do the explaining; body copy is minimal or absent.
- The recurring framework graphic is reused across courses, ghosted back to gray and re-highlighted to show position. This is the visual spine of the program.
- Chevron and arrow shapes indicate sequence; rectangles beneath them hold the contents of each stage.
- Numbered items inside stage blocks run continuously across the whole framework rather than restarting per block.
- Content lives inside a defined frame with visible margin on all four sides. Nothing bleeds except the cover.

Art direction

Representative photographic treatment: aerial landscape, natural systems, human infrastructure integrated rather than dominant. White chevron overlay locks the image into the brand.

PHOTOGRAPHY

- **Subject.** Environment, climate, and built infrastructure. Aerial and elevated perspectives. Water, forest, roadway, plant. Consistent with a sustainability-forward corporate position.
- **Treatment.** Cool, desaturated, natural light. No heavy filters, no stock-business imagery, no posed handshakes or conference-room clichés.
- **Composition.** Wide, with open area reserved for type. Headline sits in the darker region, white, bottom left.
- **Frequency.** Photography is rare. Most slides are diagrammatic. Photography appears on covers and act openers only, which is what preserves its impact.

THE CHEVRON DEVICE

The brand's signature graphic is the apex form taken from the "A" in the wordmark, extended into full-height converging lines. Observed as thin white strokes over purple or photographic grounds, running off the top and bottom edges, weighted to the right side of the frame. Use one or two strokes at most. It is a signature, not a pattern; it should never become a repeating texture or a background fill.

OBSERVED

DIAGRAMS AND DATA

ELEMENT	STANDARD
Process flow	Chevron arrows, left to right, filled solid, bold white Title Case labels centered inside.
Stage detail	Rectangles directly beneath each chevron, same fill color, numbered list in white.
Emphasis	Red rounded-rectangle outline around the active stage, plus a black arrow and a bold quoted label above it.
Recall	Prior-course frameworks reappear ghosted to light gray with only the current element at full strength.
Charts	No chart conventions were observed in the sampled material. If charts are required, build them in the core palette, flat fills, no 3D, no gridline clutter. VERIFY
Icons	No consistent icon set was observed. Recommend avoiding icons entirely rather than introducing a foreign style. INFERRED

Facilitator document standards

Run sheets, workbooks, and participant handouts are Unmute-authored rather than Trane-authored, but they carry the Trane palette so they read as part of the same program. These conventions are already established across the eight courses and should not drift.

RUN SHEET FORMAT

ATTRIBUTE	STANDARD
Orientation and grid	Landscape, seven columns: Slide, Title, Type, Time, Key Points, Verbatim/Editorial, Facilitator Cues.
Typeface	Calibri for run sheets, Arial for anything participant-facing that sits alongside the deck.
Segment headers	Header card per segment with a running clock, filled in Deep Purple with white type.
Emoji	None, anywhere.

ANNOTATION LAYER COLORS

Each review cycle adds a dated layer rather than overwriting the last. Color is what makes provenance legible at a glance.

LAYER	COLOR	MEANING
BOB	Deep Purple	Original knowledge-transfer content from the course designer.
BOB — [MON YEAR] REVIEW	Deep Purple, bold italic	Post-delivery review notes, dated by cycle.
MATT — [MON YEAR] DELIVERY	Green	Facilitator's own observations captured after running the class.
Beyond the Source	Teal	Supplementary concepts not present in the deck.
Aaron requests	Trane Purple	Client-directed pedagogical changes.
Structural flags	Amber / Red	Timing risk and unresolved DECIDE/VERIFY items requiring resolution before delivery.

Why this belongs in a brand document. The annotation palette deliberately reuses the Trane accent colors rather than inventing new ones. That keeps a facilitator moving between the deck and the run sheet inside one color language, which reduces the cognitive switch cost during live delivery.

Do, don't, and open items

DO	DON'T
Use #6400FF for identity and #32007E for structure.	Introduce a second brand hue to "add visual interest."
Keep slides white-dominant with purple bands.	Fill entire content slides with purple. It flattens the divider hierarchy.
Let one diagram own the slide.	Stack three frameworks to save a slide. Slide count is not the constraint; comprehension is.
Ghost prior frameworks to gray and highlight the current position.	Redraw the framework in a new style each course.
Reserve teal and red for a single point of emphasis.	Use red as a fill or teal as a decorative accent.
Use the supplied logo file, bottom right, consistent size.	Rebuild, stretch, recolor, or place the logo on a busy image region.
Keep Cultivate styling inside Cultivate-sourced modules.	Blend the two house styles inside one deck.
Set headlines in sentence case, diagram labels in Title Case.	Use all-caps headlines or emoji anywhere.

OPEN ITEMS TO RESOLVE

#	ITEM	OWNER
1	Obtain the official Trane Technologies brand guide and source PowerPoint template.	Aaron Olita
2	Confirm the corporate typeface and whether Arial is the sanctioned substitute for internal training material.	Aaron Olita
3	Confirm exact hex values against the source theme file rather than sampled renders.	Aaron Olita
4	Obtain vector logo assets in both black-with-purple-apex and all-white versions.	Aaron Olita
5	Confirm whether an approved chart and data visualization standard exists.	Aaron Olita
6	Confirm co-branding rules for Cultivate and subcontractor-authored materials.	Aaron Olita / Cultivate
7	Confirm whether participant-facing workbooks are governed by the same standard as slides.	Sarah Crutchfield

Status. This is an observational reference compiled from delivered materials, not an authorized brand standard. It is fit for keeping Unmute-authored materials visually consistent with the program. It is not fit for external publication, marketing use, or any application where Trane trademark usage rules apply.
